PROJECTS

SIGN LANGUAGE RECOGNITION USING DEEP LEARNING

Real-time sign language recognition achieved through LSTM layers, MediaPipe, and a deep language model converts manual gestures into text, promising transformative action detection in real-time communication.

DRIP MONITORING SYSTEM

An IoT-based drip monitoring system utilizes sensors to track and optimize water usage, promoting efficient irrigation practices through real-time data analysis and remote control capabilities.

FACE RECOGNITION BOT

A face recognition bot project employs computer vision techniques to identify individuals, enabling personalized interactions and enhancing security measures in various applications such as access control and user authentication.
